

# Save the Great Indian Bustard and the Grassland Habitat

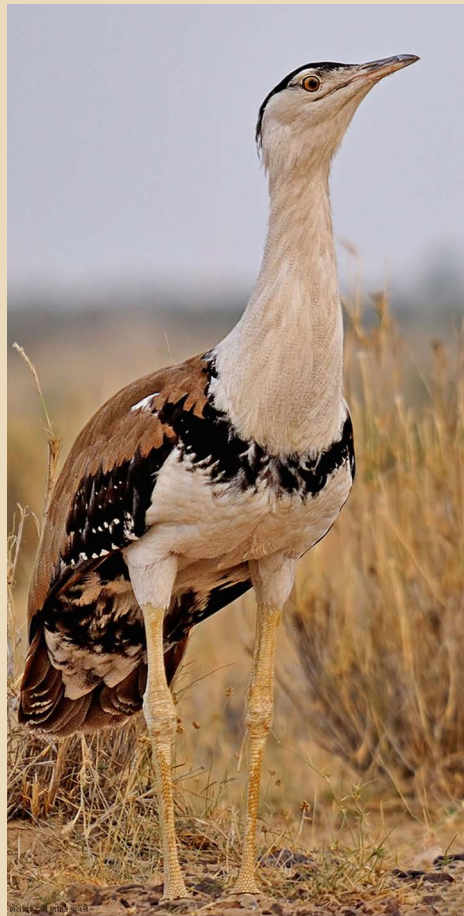

## The major threats in the wild are...

Dog threat to the eggs and the chick

Poisoning the food chain by pesticides

Great Indian Bustard male in the Grassland Habitat

Spraying the insecticides to kills the insects and bugs

Poisoned insects harms the Birds

## Only 300 Bustards are left in India, vanishing fast due to habitat destructions

## Support us in our fight to save the wilderness
